```csharp
using System;
using System.Net;
using System.Windows.Forms;

namespace Formsy
{
    public partial class HostIPForm : Form
    {
        public HostIPForm()
        {
            InitializeComponent();
            label1.Text = "Хост: " + Dns.GetHostName();
            label2.Text = "" +
Dns.GetHostByName(Dns.GetHostName()).AddressList[0].ToString(); ;
        }

        private void button1_Click(object sender, EventArgs e)
        {
            Form1 form = new Form1();
            form.ShowDialog();
            this.Hide();
        }
    }
}
```
